*n*Logic®
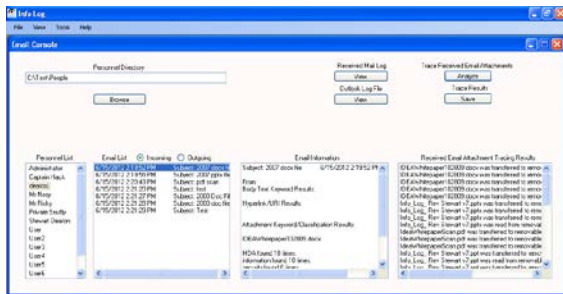

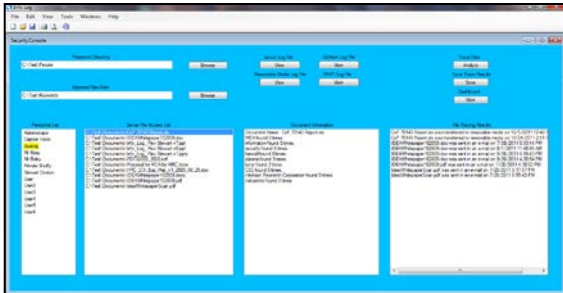

InfoLog© Cyber Security Software Suite

- **InfoLog©** is a cyber security software product suite that addresses Information Assurance and Computer Network Defense capability gaps, conducts vulnerability assessments, and enables compliance with security policies

- **InfoLog©** logs, protects, monitors, detects, and analyzes user activities and data movement

- Log File Manager manages directories and directory permissions

- Media Monitor logs removable media data operations locally and manages upload of logged data to domain server

- Outlook Add-in scans incoming/outgoing email and attachments for keywords/classifications and logs data to domain server

- Internet Explorer Monitor logs URLs visited and keystrokes entered

- Application Monitor monitors and logs applications run locally

- Print Monitor monitors and logs print jobs

- Security Console provides an interface for viewing and analyzing client and server data activity logs

- Email Console analyzes incoming and outgoing email activity and traces incoming email attachment distribution

- File Trace Console provides a dashboard for quick-look analysis of file distribution activity logged

- Audit Configuration Tool manages file audit rules for files monitored

- File Monitor monitors and logs server file access

- Server Log File Manager manages central log file directories and log file directories/directory permissions
